EDUCATION

Georgia Institute of Technology

Atlanta, GA May 2025

Masters of Science in Computational Science and Engineering

- **GPA:** 4.0; **Honors:** Donald V. Jackson Fellowship

University of Arizona

Tucson, AZ May 2023

Bachelor of Science in Computer Science; Minor in Mathematics

- **GPA:** 4.0; **Honors:** Summa Cum Laude, National Scholars Tuition Award, USTFCCCA All-Academic honoree 2022

EXPERIENCE

Graduate Teaching Assistant – CSE 6010: Computational Problem Solving

August 2024 - Present

Georgia Institute of Technology

- Graded programming assignments, providing constructive feedback to support student's learning.
- Held weekly in person office hours to help students with course material and assignments.
- Responded to student questions on Piazza and email in a timely manner.
- Supported in-class coding workshops by providing assistance to students.

Student Athlete – Track and Field/ Cross Country

August 2020 - Present

University of Arizona / Georgia Institute of Technology

- Acted as cross-country team captain, coordinating practices, uniforms, and team moral.
- Achieved notable athletic accomplishments, including participation in the 2022, 2024 NCAA track and field national championships, and setting the school record in the 3000m steeplechase.
- Developed strong work ethic, mental toughness, and time management to achieve personal and team goals.

Instructor

Summer 2024

ID Tech Camps, Georgia Institute of Technology

- Taught Python and Machine Learning to students aged 10 to 17, creating a fun and engaging learning environment for classes of up to 12 students.
- Developed supplemental assignments and activities to reinforce and enhance the curriculum.
- Applied behavior management techniques to maintain a safe environment, enforcing rules and supervising students during all activities.
- Assisted with location set-up, tear down, product inventory, and session check-ins; led and organized icebreakers and indoor/outdoor activities.

Research Assistant

April 2021 - May 2023

Porreca Lab, University of Arizona Dept of Pharmacology

- Set up and managed hardware and software systems for large-volume data acquisition.
- Conducted pre-processing and analysis of EEG/EMG data to study sleep under various conditions.
- Prepared data visualizations and figures using MS Excel and Graph Pad Prism.
- Assisted in laboratory equipment setup, animal handling, and sample collection while following safety protocols.

Software Development Engineer Intern

Summer 2022

Amazon

- Developed an OpenSearch domain and visualization dashboard, which was integrated into an existing system to monitor over 200,000 daily log messages.
- Leveraged AWS services (OpenSearch Service, IAM, Route53, VPC, CloudFormation) to deploy and manage infrastructure.
- Ensured project compliance with security standards for handling sensitive customer data.

- Implemented object-oriented design patterns in Java for maintainable and extensible code.

Volunteer Blood Donor Ambassador

May 2020 - August 2020

American Red Cross

- Volunteered approximately 48 hours over summer break.
- Managed the hospitality experience by assisting donors with registration upon arrival, offering refreshments to donors, thanking them for their contribution and alerting staff of any indicators of donors feeling unwell.
- During the COVID 19 pandemic, conducted temperature screens and disinfected surfaces to minimize the risk of spreading diseases.

Baseball Umpire

March 2017 - June 2019

Sabino Canyon Little League

- Officiated baseball games from T-ball to middle school level.
- Responsible for starting and ending games at the correct time, making high pressure judgement calls quickly, and ensuring safety rules are correctly followed.
- Settled disputes and took complaints from coaches, players, and parent regarding calls.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, C, Bash, SQL, HTML/CSS
- **Frameworks and Tools:** PyTorch, scikit-learn, NodeJS, Git

PROJECTS

- **E. coli Pathotype Prediction:** Group project predicting *E. coli* pathotypes from genomic data. Evaluated Decision Tree, Gradient Boosting, KNN, Logistic Regression, MLP, Random Forest, and SVC models, applying feature engineering (MCA, RFECV) and hyperparameter tuning. Contributed to developing code for training, evaluation, and feature selection, and contributed to the final report.
- **GT Stinger Bus Simulation:** Group project simulating the on-campus bus and passenger movement using real-world data for validation. Used this model to analyze the effect of bus starting points on passenger wait times. Contributed to the literature review, conceptual model development, and simulation implementation.
- **Forest Fire Burn Area Prediction:** Applied regression algorithms, including linear regression, support vector regression (SVR), and artificial neural network (ANN), using scikit-learn and PyTorch on an existing dataset to predict burn area for a specific day.
- **Chess:** Chess game programmed in Java for a group final project in an object-oriented programming and design class. Contributed to creating the game's model, which included the piece movement logic, checking for checkmates and checks, and other game rules.
- **Connect 4:** Multiplayer Connect 4 game created with JavaScript, HTML, and CSS created as a final project for a human computer interaction class. Focused on usability and user experience in design phase by creating user personas, use cases, story boards and mockups.
- **"Spooky Game":** Point-and-click adventure game website hosted live on a Linux server. Utilized MongoDB to create a database to store user statistics. Created a user account system with salted and hashed passwords and login sessions.
